

SELF-AUTHORED PRODUCTION PROMPT · V2

Rethrow AI: 3-minute product overview video

Claude researched rethrow.ai and wrote this prompt for itself, then used it to build the finished video. It's updated with the founder's feedback from round 1: story ordering, a founder segment, a workspace segment, new messaging, stricter pronunciation, and more upbeat music.

1. Objective

Create a ~3:15, 1080p explainer video for **Rethrow AI** (rethrow.ai) that's ready to upload to YouTube and embed on the site. After watching, a viewer should understand:

- **The problem:** the *vibe coding cliff*, which is the gap between an app that demos well and one that can operate in production (scalability, security, reliability, ownership).
- **The promise:** "Move beyond vibe coding without becoming a cloud engineer." Migrate what you already built, and run it on cloud infrastructure you own.
- **How it works:** agent-orchestrated migration, Rethrow Studio, and a **multi-harness control plane** across AWS, GCP, Azure and OCI.
- **Credibility:** the founder's background and Launchpad Tech Ventures.
- **The action:** join the waitlist at rethrow.ai ahead of launch in early 2027.

Tone: confident, clear, builder-friendly and lightly technical. Make no claims beyond the source facts.

2. Deliverables

File	Spec
rethrow-overview-v2.mp4	1920x1080, 30 fps, H.264 High / yuv420p, AAC 48 kHz, faststart, loudness around -14 LUFS (YouTube's target). Also a smaller copy under 30 MB for sharing.
...-music-only.mp4	The same picture with music only, so a human can narrate over it.
.srt captions	Generated from the narration timings.
youtube-description.txt	Title, description, chapter timestamps and tags.
thumbnail.png	1280x720.

3. Production method

- **Research:** render the site's client-side pages in headless Chromium. Extract the copy, the FAQ answers, the brand kit, the logos, the product screenshots (Migrations, Studio, Organize) and the founder photos from the About page.
- **Animation:** build all scenes in a single HTML page whose visual state is a pure function of time `t`, and cue every animation to the narration line or word being spoken.
- **Render:** step through frames with Playwright (4 parallel workers at 30 fps) and pipe them into ffmpeg/libx264.
- **Voice:** use Kokoro, an open-source neural TTS model (voice `af_heart`: clear, friendly, female) at 0.97x speed, generated line by line so the animation can sync to it.
- **Pronunciation:** feed the voice model exact phonemes through a custom lexicon (§7). Convert the phonemizer's two-character diphthongs (`ei ai ou au oi`) to the single symbols Kokoro was trained on. This is what fixed “Droid” being read as “dried”.
- **QA:** transcribe the narration with Whisper (small.en) and confirm every brand and technical term. Extract stills at each scene's midpoint to check layout, overflow and masking.
- **Music:** synthesize it in code so it's royalty-free and can't draw copyright claims (§8). Duck it about 5 dB under the voice and loudness-normalize the final mix.
- **Privacy:** mask personal details (name and email) in every product screenshot.

4. Brand system (official brand kit)

Token	Value	Use
 Midnight Navy	#0B1220	Background
 Electric Blue	#2563FF	Primary accent, CTAs, “Ownership”
 Violet	#A855F7	Gradients, badges, connector dots
 Sky Blue	#38BDF8	Motion accents, spotlights
 Sky Mist /  Slate	#F3F6FB / #94A3BB	Primary / secondary text

Type: Plus Jakarta Sans (ExtraBold headlines with tight tracking) and JetBrains Mono for code. **Visual language:** a navy dot grid with drifting blue and violet glows; rounded cards with blue-tinted borders and soft glow; code windows labeled rethrow.ai; connector lines with traveling dots. **Logos:** use the real logos from the site for source platforms, harnesses and clouds, plus a trademark and compatibility note on the end card.

5. Core messaging

Move beyond vibe coding without becoming a cloud engineer.

Rethrow bridges the **vibe coding cliff**: the gap between an app that demos well and one capable of operating in production. It moves apps built on vibe-coding platforms onto real, managed cloud infrastructure, handling migration, hosting, deployment and cloud operations across **AWS, GCP, Azure and OCI**. Rethrow

Studio lets teams keep building with their preferred coding agent (Kiro, Claude Code, Codex, Gemini CLI, Cursor Agent and more). Under the hood, Rethrow is a **multi-harness control plane** that standardizes how agents interact with code, execution environments and cloud infrastructure. The result is a simple path from prototype to durable software.

6. Source facts (use only these)

- **Migrate:** \$500 one-time with a free assessment. Connect (GitHub App) → Assess → Plan (spec-driven) → Migrate → Launch. The source app is untouched and validated before cutover. Say “in hours, not weeks.”
- **Agentic loop:** one spec at a time: write code → deploy → verify → commit. Failures feed back to the agent, which retries and escalates to a human when needed.
- **Studio:** from \$100 per user per month. Prompt, preview and publish; Vibe and Spec modes; inspect code and infrastructure; a managed deployment pipeline.
- **Harnesses:** Kiro is the default and is included. Bring your own: Claude Code, Codex, Gemini CLI, Cursor Agent, Factory Droid.
- **At launch:** multi-user, multi-app workspaces.
- **Founder:** Dustin Ellis, former AWS Senior Solutions Architect, AWS Developer Ambassador (Kiro), 10x AWS certified, U.S. Marine Corps veteran.
- **Company:** completed the Launchpad Tech Ventures Summer '26 accelerator and is a Launchpad Ignite member. In active development and accepting technology and community partnerships ahead of launch in early 2027. The call to action is to join the waitlist at rethrow.ai.
- **Required disclaimer:** pricing, features and agent availability are subject to change before launch in early 2027. Until then, the development team is heads-down building the best experience for future customers.

7. Pronunciation lexicon (mandatory)

Term	Say it as	Phonemes fed to TTS
Rethrow	re-THROW	ɹ, i: θɹ 'oʊ
rethrow.ai	re-THROW dot A-I	ɹ, i: θɹ 'oʊ d 'ɑ: t , eɪ 'aɪ
AWS	A-W-S (letters)	, eɪ d, ʌ bəl jʊ: 'ɛs
GCP	G-C-P	dʒ, i: s, i: p 'i:
OCI	O-C-I	, oʊ s, i: 'aɪ
Azure	AZH-er	'æʒə
Kiro	KEER-oh	k 'ɪ ɹ oʊ
Claude Code	clawd code	kl 'ɔ: d k 'oʊ d
Codex	KOH-dex	k 'oʊ dɛks
Gemini CLI	JEM-in-eye C-L-I	dʒ 'ɛ mɪ naɪ s, i: , ɛ l 'aɪ
Cursor Agent	KUR-ser AY-jent	k 'ɜ: ɹ səɹ 'eɪ dʒənt
Factory Droid	FAK-tuh-ree DROYD	f 'æ ktəɹɪ dɹ 'ɔɪ d
Base44	base forty-four	b 'eɪ s f 'ɔ: ɹɪ f 'ɔ: ɹ
Replit	REP-lit	ɹ 'ɛ plɪ t
GitHub	GIT-hub	g 'ɪ th ʌ b
MVP	M-V-P	, ɛ m v, i: p 'i:
\$500 / \$100 / 2027 / Summer '26	five hundred dollars / one hundred dollars / twenty twenty-seven / Summer twenty-six	(spelled out in the spoken text)

Verify with speech-to-text before rendering. Every term above must come back correctly. If one doesn't, adjust its phonemes rather than respelling the word.

8. Music

Upbeat but subtle, with a “new tech startup” feel. 116 BPM in A major, cycling I–V–vi–IV (A, E, F#m, D).

- **Pad:** warm, with a sidechain pump on each kick.
- **Arpeggio:** a syncopated 16th-note pluck.
- **Bass:** offbeat 8th notes.
- **Drums:** a soft four-on-the-floor kick from the “bridge” scene onward, claps on beats 2 and 4, offbeat hats and a 16th-note shaker.

- **Transitions:** noise swells into the bridge, control-plane and CTA scenes.
- **Dynamics:** filtered darker during the cliff scene, opening up at the bridge, stripping back for the founder segment and building again for the CTA.
- **Level:** about 8–9 dB under the voice.

9. Brand code motif

```
// your app outgrew the prototype
try {
  yourApp.shipFast();
} catch (OutgrewThePrototype e) {
  rethrow(yourApp)
    .onto(dedicatedCloud); // AWS · GCP · Azure · OCI
}
// production-grade, owned by you ✓
```

10. Storyboard and narration (final timings)

#	Time	Visuals	Narration
1	0:00-0:07	Signature mark swirls in and resolves to the white wordmark. Headline "Vibe coding changed everything." with "everything" in a blue → violet gradient; subtitle "A few prompts. A working app."	<i>"Vibe coding changed everything. With just a few prompts, anyone can build an app."</i>
2	0:07-0:21	Two glowing cliff plateaus with a gap between them. Left: DEMO with a "Your MVP" card showing Lovable, Base44, Replit and Bolt logos. Right: PRODUCTION with a dashed, unreachable "Production-ready" card. The gap glows amber and is labeled THE VIBE CODING CLIFF ; Scalability, Security and Reliability warning chips drop into it. Headline: "Do you own what you built?"	<i>"But there's a gap between an app that demos well, and one that's ready for production. We call it the vibe coding cliff. Scalability. Security. Reliability. And one big question: do you actually own what you built?"</i>
3	0:21-0:34	Same cliff geometry, so the crossfade is seamless. A blue → violet beam spans the gap with the Rethrow wordmark and "bridges the gap". Headline: "Move beyond vibe coding / without becoming a cloud engineer." The MVP card arcs across the bridge and becomes a green, filled "Production-ready" card showing AWS, GCP, Azure and OCI logos. Caption: "Migrate what you already built. Run it on cloud infrastructure you own."	<i>"Rethrow bridges the vibe coding cliff. Move beyond vibe coding, without becoming a cloud engineer. Migrate what you already built, and run it on cloud infrastructure you own."</i>
4	0:34-1:02	MIGRATE pill with "Move your app, without starting over." A "From" row of source logos (Lovable, Base44, Replit, Bolt, and more) pops in as each is named. A vertical 5-step timeline (Connect → Assess → Plan → Migrate → Launch) lights up in sync with the narration, next to the real Migrations screenshot from the site with a slow Ken Burns zoom and the personal details masked. Badges: Source app untouched · Validation before cutover · Hours, not weeks. A \$500 one-time price card.	<i>"Built your app on Lovable, Base44, Replit, or Bolt? Connect it through GitHub. Rethrow's migration agents assess your app, design an architecture on your preferred cloud, and write a spec-driven migration plan. Then they provision your environment, refactor your code, and deploy, while your original app stays untouched. Validate, switch your traffic, and you're live in hours, not weeks. Migrations start at \$500."</i>
5	1:02-1:16	Animated flowchart: Write code → Deploy → Verify → Commit & push. A glowing pulse travels the loop while a "Current spec: n / 12" counter ticks. One pass fails (red) and routes through "Feed failure to agent" back to Write code; an "Escalate to human" node glows on cue.	<i>"Behind the scenes, agents work one spec at a time. Each one writes code, deploys, and verifies its work before moving on. If a check fails, the agent retries, and brings in a human when it needs to."</i>

6	1:16–1:36	BUILD pill with “Rethrow Studio” and a “from \$100/mo” badge. The real Studio screenshot in a browser frame, with a spotlight moving to each feature as it's named: Prompt box → Preview pane → Publish → Vibe/Spec toggle → Files/Infrastructure/Diagram tabs → managed pipeline.	<i>“Then, keep building in Rethrow Studio. Prompt, preview, and publish, just like the vibe coding you love. But every change lands on infrastructure you own. Switch between Vibe and Spec modes, inspect your code and your cloud, and ship through a fully managed pipeline. Studio starts at \$100 a month.”</i>
7	1:36–2:11	An animated recreation of the founder's diagram. Header: Rethrow wordmark and MULTI-HARNESS CONTROL PLANE (glow pulse). A caption: “Standardizes how agents interact with code, execution environments, and cloud infrastructure.” Row 1, “Bring Your Own Agent Harness”: Kiro (DEFAULT · INCLUDED badge), Claude Code, Codex, Factory Droid, Gemini CLI and Cursor Agent, each lighting up as named. Row 2, “Workflows managed by Rethrow”: Migrations, Development and Infrastructure Operations. Row 3, “Against dedicated cloud infrastructure”: AWS, Azure, Google Cloud and Oracle Cloud. Connector lines draw in with traveling dots. Tagline: “Your agent. Your code. Your cloud. ”	<i>“Under the hood, Rethrow is a multi-harness control plane. It standardizes how agents interact with your code, execution environments, and cloud infrastructure. Use Kiro, built right in, or bring the agent you already use, like Claude Code, Codex, Gemini CLI, Cursor Agent, or Factory Droid. Rethrow manages every workflow, from migrations and development to infrastructure operations, across AWS, GCP, Azure, and OCI. Your agent. Your code. Your cloud.”</i>
8	2:11–2:22	ORGANIZE pill with “Multi-user, multi-app workspaces” and an At launch badge. The real workspace screenshot (Applications grid) with the app cards spotlighted and a “Workspace members” card with avatars and an + Invite button.	<i>“And at launch, Rethrow will support multi-user, multi-app workspaces. Bring your whole team, and manage every app, migration, and build from one place.”</i>
9	2:22–2:34	Three cards: Non-technical founders (“Your MVP worked. Give it a place to grow.”), Enterprise innovation teams (“Turn successful MVPs into business applications.”) and Agencies & studios (“Deliver client apps faster, with a seamless handoff.”).	<i>“Whether you’re a solo founder, an enterprise innovation team, or an agency delivering client apps, Rethrow is your path from prototype to durable software.”</i>
10	2:34–2:53	“Meet the founder”: a headshot with a glow frame and the pitch photo tilted over its corner. “Dustin Ellis, Founder, Rethrow.” Chips: Former AWS Senior Solutions Architect and AWS Developer Ambassador · Kiro , then “10× AWS certified · U.S. Marine Corps veteran”. A Launchpad Tech Ventures card: ✓ Completed Summer '26 accelerator · ♦ Launchpad Ignite member.	<i>“Rethrow was founded by Dustin Ellis, a former AWS Senior Solutions Architect, and an AWS Developer Ambassador. Rethrow recently completed the Launchpad Tech Ventures Summer '26 accelerator, and is now a member of Launchpad Ignite.”</i>

11	2:53–3:16	Rotating mark; “Vibe coding with Ownership .” Pills: “In active development · Launching early 2027” and “Accepting technology & community partnerships”. A note card: “Pricing, features, and agent availability are subject to change before launch in early 2027. Until then, our development team is heads-down building the best experience for future customers.” Button: Join the waitlist → rethrow.ai . Price line, a Launchpad badge and a trademark note. Hold 5 s for YouTube end screens.	<i>“Rethrow is in active development, and we’re accepting technology and community partnerships as we prepare for launch in early 2027. Until then, our team is heads-down, building the best possible experience for you. Visit rethrow.ai to join the waitlist.”</i>
----	-----------	--	--

11. Guardrails

- Use only the source facts. Present pricing as “starting at” and include the subject-to-change disclaimer.
- Don't present the site's early-feedback quotes as customer testimonials.
- Show third-party logos with a compatibility-not-endorsement note.
- Mask personal information in screenshots.
- If the runtime drifts, trim visuals rather than rushing the narration, and keep every narrated number on screen.

Prompt authored by Claude (Opus 5.5) in Claude Code after researching rethrow.ai; revised with the founder's feedback between versions 1 and 2.
